

Test chamber MMB-100

The tests in the chamber MMB-100

The MMB Drives company offers a research in the field of strength tests on exposure to heat and pressure. The chamber, developed and manufactured by us, enables the tests of the objects:

- with maximum length 1100 mm,
- with maximum diameter 120 mm,
- in the temperature up to 230°C,
- in the pressure up to 75 MPa.

The chamber MMB-100 is used by us to the strength testing of the electronic housings from stainless steel duplex, which are dedicated to work in the deep wells. Also, we make the tests of the special types of the seals from high-temperature materials as VITON, AFLAS and KALREZ.
